

URBREATH

Building a resilient future against climate change challenges with effective tools and impactful strategies

URBREATH aims to develop and replicate an urban revitalization methodology focused on community participation and greening initiatives. Supported by advanced technologies, the project will test local digital twins, AI, and social innovation techniques.

What we Do

By weaving nature into the fabric of our cities, from expansive green roofs to vibrant urban forests and thriving wetlands, we aim to combat the urban heat island effect, mitigate flood risks, and purify our air.

What we aim for

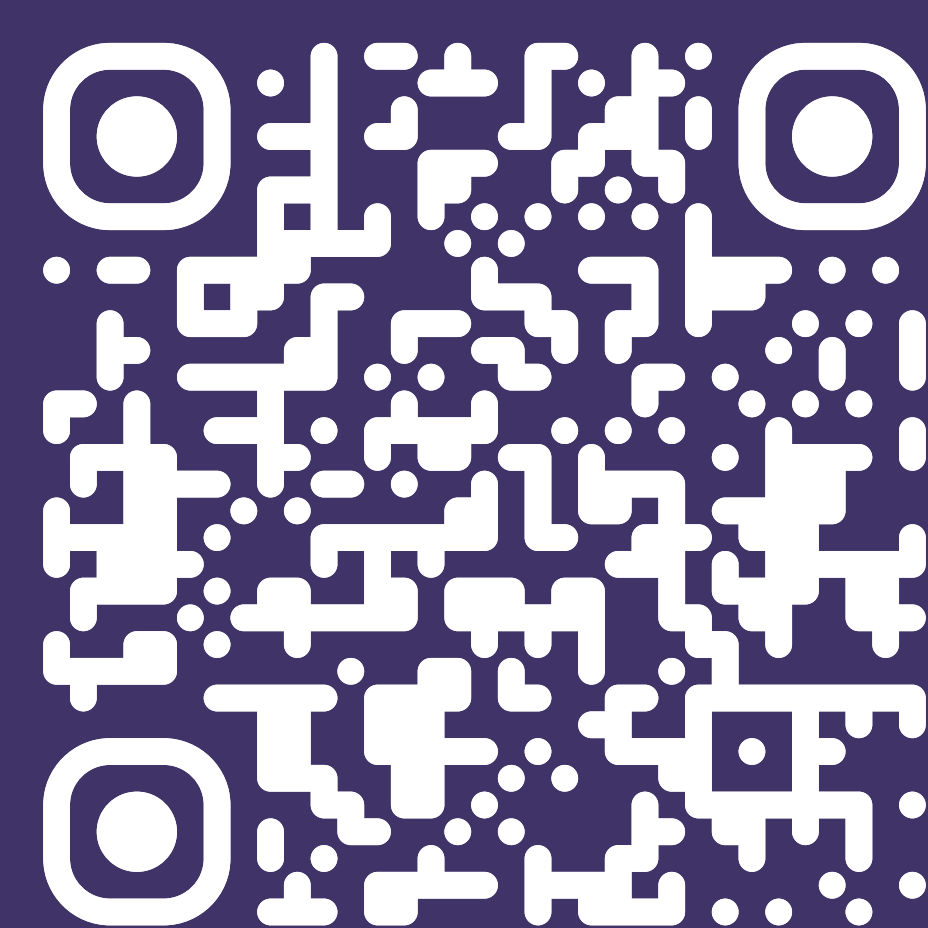

To transform our cities from the ground up, making them not only sustainable but resilient against the ever-growing threats of a warming world.

Our expectations

To make our cities more livable and inclusive but also to establish a model for urban areas to play a central role in addressing climate change, transforming our vulnerability into a powerful defense.
