

29 cities

addressing Europe's varied
climate challenges
in harmony with nature & people.

From developing deep understanding of solutions relevant to the different challenges and climate zones across Europe (URBREATH), to overcoming challenges with a starting point neglected and deprived areas (GreenInCities & ReGreenation), the three projects will support each other with lessons learnt throughout the project, and across each cities unique set of challenges.

We are grounded in a common goal to understand and use nature based solutions to improve Europe's climate resilience.

GreenInCities

GreenIn
Cities

**Demonstrating Holistic Data-driven
Co-Creative Approaches in
Nature-Based Solutions towards
climate Adaptation and Mitigation**

GreenInCities aims to develop, test and validate methodologies and tools aimed to operationalize collaborative climate mitigation and adaptation urban planning approaches and to co-create innovative “greening” and renaturing solutions for regeneration, repurposing, rehabilitation and pollution abatement in deprived urban areas.

URBREATH

 URBREATH

**Building a resilient future
against climate change
challenges with effective tools
and impactful strategies.**

URBREATH aims to develop, implement, demonstrate, validate and replicate a comprehensive, community participation and Nature Based Solution-driven paradigm within the spectrum of urban revitalization, resilience and climate neutrality. Advanced techniques, particularly Local Digital Twins and Artificial Intelligence, and social innovation will facilitate the achievement of its vision.

ReGreenation

ReGreenation
Neighborhoods for people and nature

**A collaborative initiative to
revitalize urban neighborhoods into
thriving centers of sustainability,
livability, and social connection.**

ReGreenation goes deeper than just physical improvements, prioritizing the use of people-centered and nature-based solutions to restore struggling neighborhoods. The project embodies a comprehensive approach to urban renewal, advocating for a strategic and multifaceted planning vision that considers all aspects of sustainability. This ensures the creation of cities that can flourish despite environmental challenges.
